sample
results

Concentrated **deFOG SEED** microbes lay the groundwork for preventing both SSOs and the formation of solid grease mats in lift stations. They also promote bounce-back from treatment plant washouts, and help maximize sewer capacity.

- Controls F.O.G, odors and maintenance costs.
- Biodegradable, non-hazardous.
- Only CO₂ and H₂O byproducts.
- Bred to cultivate grease-eating biofilm and establish BOD-reducing culture base in sewer

SEED is available in 6-gallon pails:

SEED (deFOG system)

jetting/pigging

chemicals
